NOW

AFTER 3 FIXES

+32 points possible

AI Insight

Look, we need to have a serious talk. Your composite score of 55/100 is the equivalent of showing up to a job interview with half your resume written in crayon. The real problem? You've got JWT tokens and API secrets scattered throughout your source code like Easter eggs at a cybersecurity convention - except nobody's having fun finding them. You're sitting on a vibe safety score of 7/100, which is genuinely impressive in the worst way possible. Between the hardcoded secrets, outdated dependencies with known CVEs, and CORS misconfiguration that's basically a welcome mat for attackers, this codebase needs immediate life support. The good news: these are all fixable problems. The bad news: you should have fixed them before committing.

YOUR PRESCRIPTION - 3 FIXES, +32 POINTS

1 CRITICAL +12 pts

jspdf@4.2.0: -31938 - jspdf: jsPDF: Cross site scripting via unsanitized output options

[CRITICAL] jspdf@4.2.0: CVE-2026-31938 - jspdf: jsPDF: Cross site scripting via unsanitized output options (📁 project-level)

2 CRITICAL +12 pts

JWT token in source code - Hardcoded JWT found — tokens should be generated at runtime

3 HIGH gitignore-quality - .gitignore missing entries: build +8 pts

0 **Security Issues** 15 findings

Alright, let's address the elephant in the room - and by elephant, I mean the parade of secrets you've left in your codebase like breadcrumbs. You've got JWT tokens living...

CRITICAL jspdf@4.2.0: -31938 - jspdf: jsPDF: Cross site scripting via unsanitized output options

CRITICAL protobufjs@6.11.3: -36665 - protobufjs: prototype pollution using user-controlled protobuf message

CRITICAL fast-xml-parser@5.4.1: -33036 - fast-xml-parser affected by numeric entity expansion bypassing all entity expansion limits (incomplete fix for -26278)

CRITICAL jsonwebtoken@8.5.1: -23539 - jsonwebtoken: Unrestricted key type could lead to legacy keys usagen

CRITICAL jspdf@4.2.0: -31898 - jspdf: jsPDF: Arbitrary code execution via unsanitized input in createAnnotation method

CRITICAL tar@6.2.1: -23745 - node-tar: tar: node-tar: Arbitrary file overwrite and symlink poisoning via unsanitized linkpaths in archives

CRITICAL tar@6.2.1: -23950 - node-tar: tar: node-tar: Arbitrary file overwrite via Unicode path collision race condition

CRITICAL tar@6.2.1: -24842 - node-tar: tar: node-tar: Arbitrary file creation via path traversal bypass in hardlink security check

CRITICAL tar@6.2.1: -26960 - tar: node-tar: node-tar: Arbitrary file read/write via malicious archive hardlink creation

CRITICAL tar@6.2.1: -29786 - node-tar: hardlink path traversal via drive-relative linkpath

CRITICAL tar@6.2.1: -31802 - tar: tar: File overwrite via drive-relative symlink traversal

CRITICAL undici@5.28.4: -1526 - undici: undici: Denial of Service via unbounded memory consumption during WebSocket permessage-deflate decompression

CRITICAL undici@5.28.4: -2229 - undici: Undici: Denial of Service via invalid WebSocket permessage-deflate extension parameter

CRITICAL xlsx@0.18.5: -30533 - Prototype Pollution in sheetJS

CRITICAL xlsx@0.18.5: -22363 - SheetJS Regular Expression Denial of Service (ReDoS)

7 **Vibe Coding Health** 253 findings

A vibe safety score of 7/100 is genuinely concerning. This suggests either the code was generated without proper review, or there's been significant technical debt accumulatio...

55 **Code Quality** 15 findings

ESLint found 50 issues, which suggests your code quality might be a bit like a restaurant kitchen after the health inspector leaves - technically functional but deeply concerning....

75 **Best Practices** 1 finding

Best practices are more of a suggestion here, aren't they? You've created a masterclass in what NOT to do: storing secrets in source code, mixing authentication tokens with...
